

IMPORTANT INSTRUCTIONS FOR USING ON macOS 15 (Sequoia) and macOS 26 (Tahoe) and above:

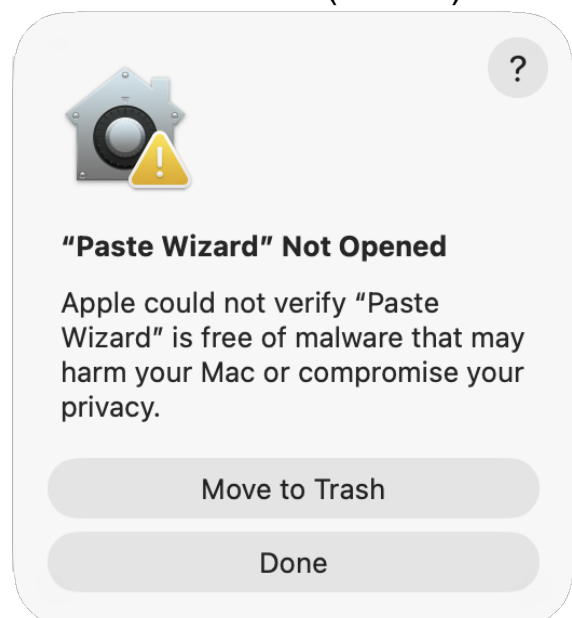

Starting in Sequoia (macOS 15), control- or right- clicking an app (not downloaded from the App Store) and choosing **Open** no longer allows the app to run. Instead, after trying to launch, you must open **System Settings**, choose **Privacy and Security**, then scroll to the bottom and approve running the app. **You should have to do this only once.** See below for specifics with screenshots using Records Wizard or Paste Wizard as an example.

When you first try to open with click or right- or control- click you get a message similar to this:

macOS 15 (Sequoia)

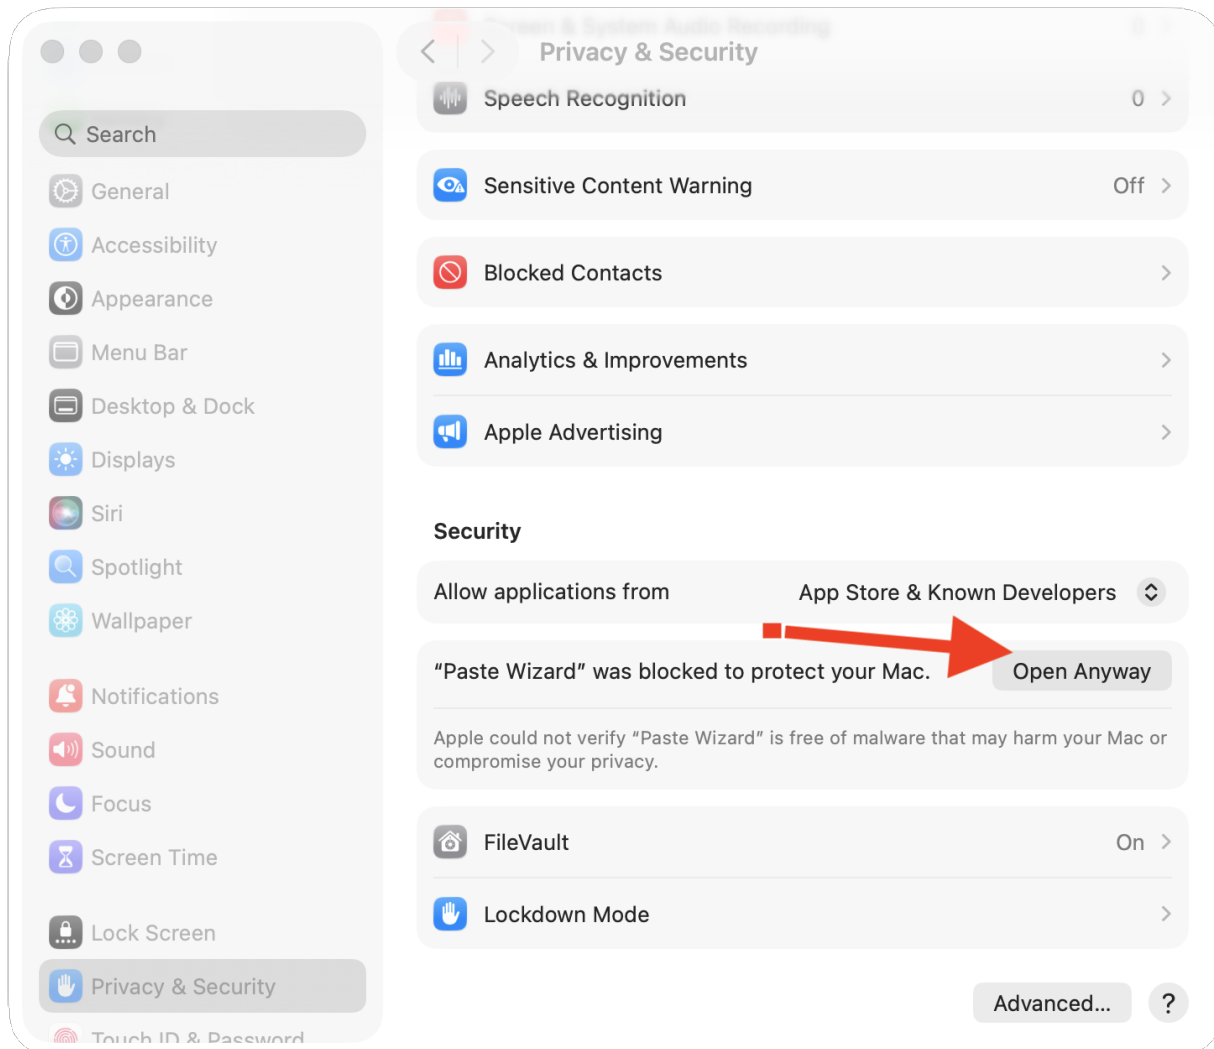

macOS 26 (Tahoe)

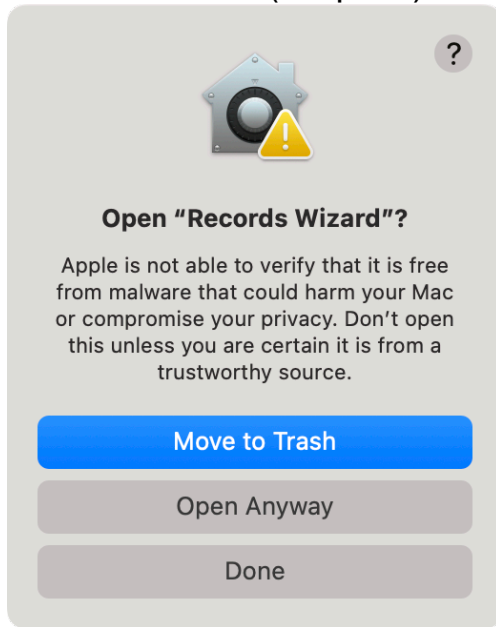

Click **Done**.

Then, go to **System Settings-> Privacy & Security** and **scroll to the bottom** and click on **Open Anyway**:

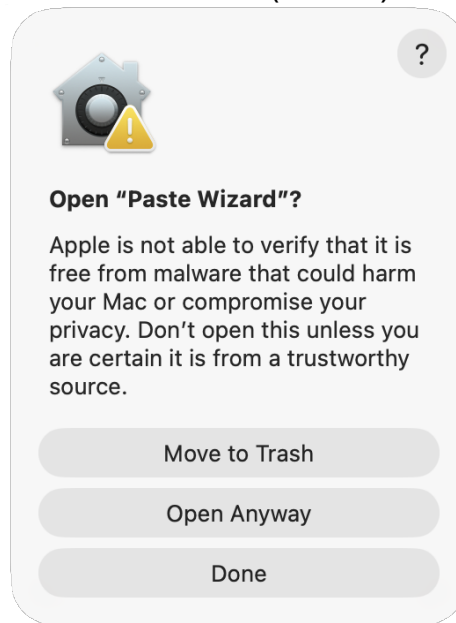

Then try to open again:

macOS 15 (Sequoia)

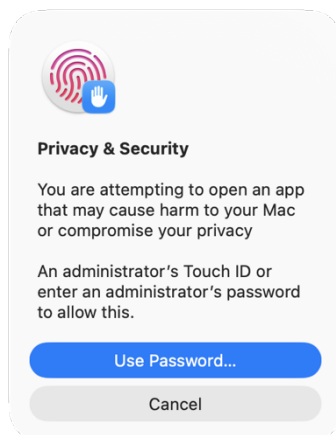

macOS 26 (Tahoe)

Click on **Open Anyway**.

Then you will see:

RIDICULOUS! Blame Apple, not me!!
